CONTRIBUTION JOURNAL

1. JENNIFER R.

For contribution in this project, I try to prepare everything in GitHub and have everything prepared and ready for others. Since I have never experience Google Collab, it was a good chance to have myself experiment and get used to this platform for future works, along with trying to see if I can get it to work on VS Code (as stated in the Lab that it could be an option and can also work with GitHub). Only reason for this in case one way does not work we have an alternative way to get the work done. But most importantly I try to keep everything organized and in check in GitHub so that its findable and collaboration between everyone is easier.

2. SAFA BASIL

My contribution to this project was reviewing the lab notebook and going through the exercises to better understand how the code and outputs worked. I checked the completed work and reviewed the use of pandas, NumPy, and matplotlib in the lab. I also worked on the reflection portion by identifying what I learned and the challenges I experienced. I helped make sure the final work met the assignment requirements before submission.

3. MARCUS W.

For contribution, I help with general workflow to make sure we are all on the same page with what we need to do. I am not very good with group projects so it is good experience to talk as much as I can and vocalize when needed. I also am new to Google Collab, so it was good experience trying to figure out how things worked to pass on the knowledge.

4. ZAYAAN A.

For my contribution to this project, I worked on completing and reviewing the assigned parts of the lab. I went through the exercises, and I checked the code and outputs and made sure everything was working as expected. I did a quick review on the work completed by our team and made sure the final project was organized and followed the

assignment instructions. I also have some experience with google collab but not as much so I had to learn and experience working with Google Collab and understanding how Python libraries are used. I communicated with my team members when needed and helped make sure we were all on the same page before we all submitted the final work.
